## Enhancements

### Dispense

#### Dispense Interactions window now has a Previous button

The Dispense **Interactions** window now displays a **Previous** button for easier navigation when more than one page of interactions is displayed.

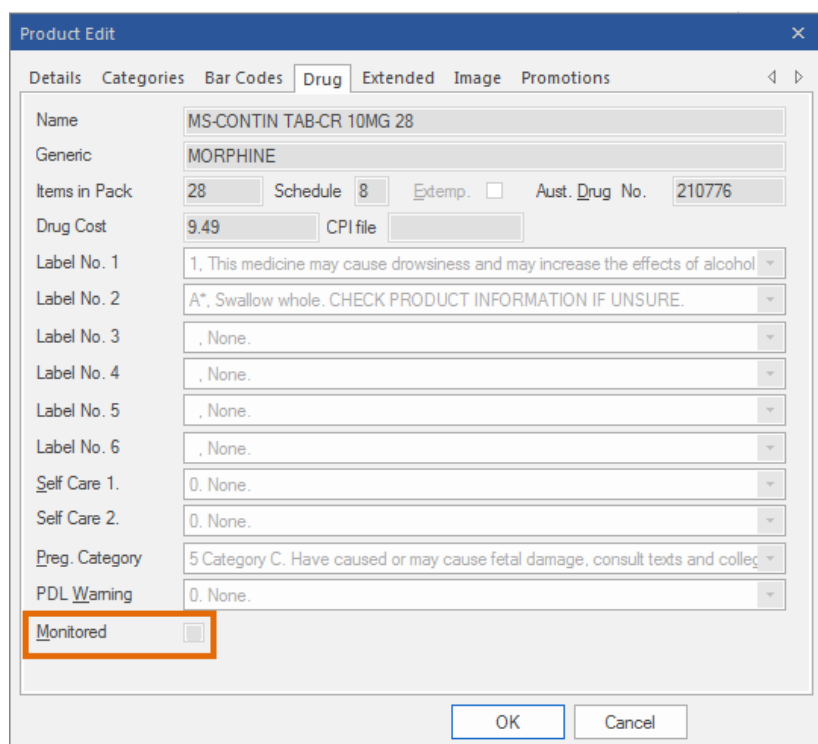

### Tasmania - Real Time Prescription reporting

Tasmania's real time reporting system, the **Drugs and Poisons Information Online Remote Access (DORA)**, has a new requirement to capture supply on an extended list of substances no longer limited to S8's.

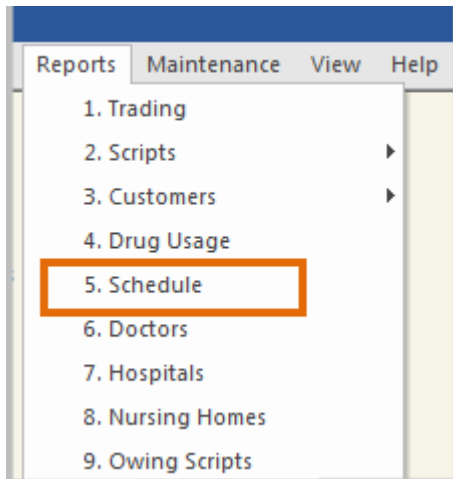

To support this, a new checkbox – **Monitored**, has been added to the **Drug** tab of the product stock card.

This checkbox is maintained by the monthly Dispense Updates and requires no attention from you. Drugs with the **Monitored** checkbox selected will be captured within the RTR process and handled through the **File Monitor**.

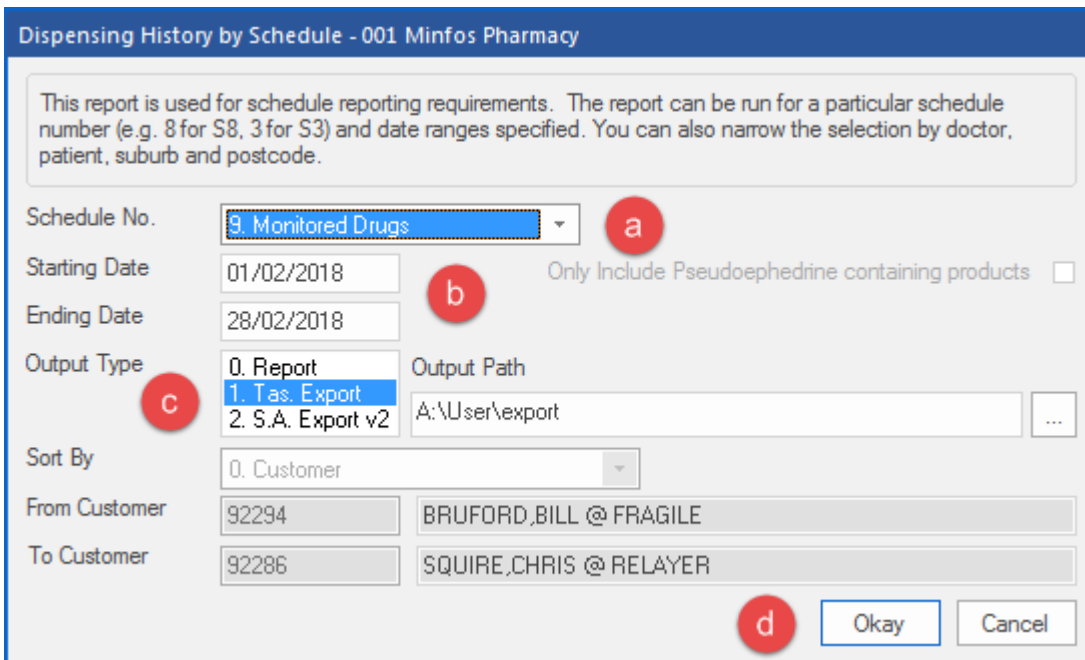

If you are required by the **Tasmanian Department of Health** to submit a manual export:

1. From **Dispense Pro**, click the **Reports** menu and select **5. Schedule**.

The **Dispensing History by Schedule** window displays.

**Dispensing History by Schedule - 001 Minfos Pharmacy**

This report is used for schedule reporting requirements. The report can be run for a particular schedule number (e.g. 8 for S8, 3 for S3) and date ranges specified. You can also narrow the selection by doctor, patient, suburb and postcode.

Schedule No. **9. Monitored Drugs** a

Starting Date **01/02/2018** b Only Include Pseudoephedrine containing products ☐

Ending Date **28/02/2018**

Output Type **1. Tas. Export** c Output Path **A:\User\export** ...

Sort By **0. Customer**

From Customer **92294** **BRUFORD,BILL @ FRAGILE**

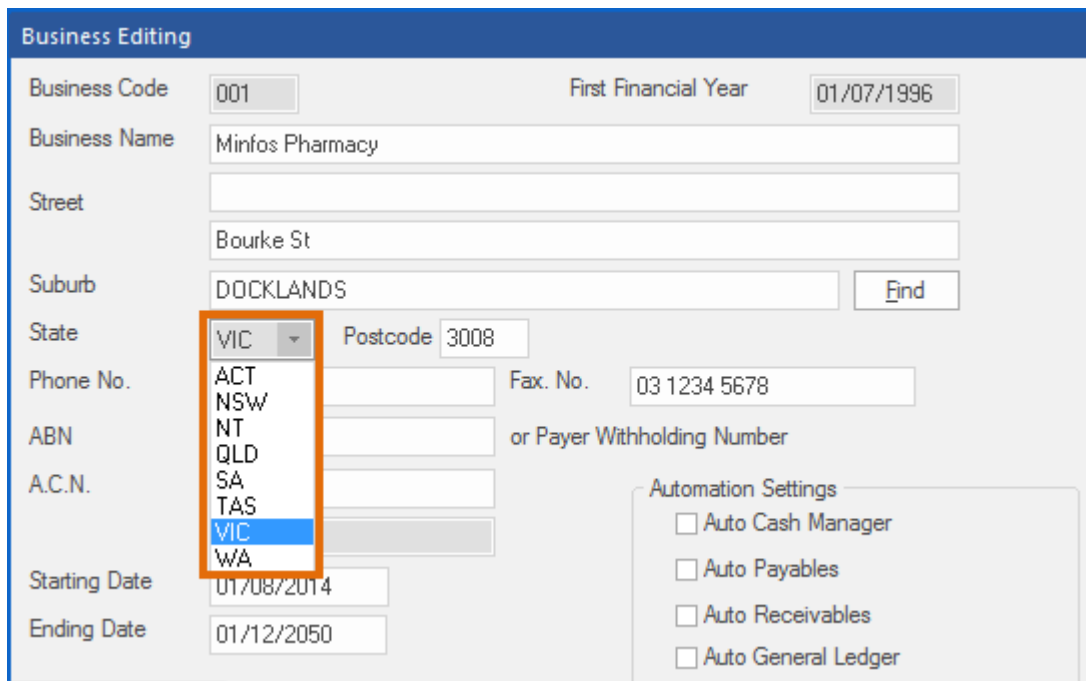

To Customer **92286** **SQUIRE,CHRIS @ RELAYER**

d **Okay** **Cancel**

- a. Select **9. Monitored Drugs** from the dropdown list.
- b. Select the required time period for the report.
- c. Select **1. Tas. Export**.
- d. Click **Okay** to export the report to the designated folder.

## Real Time Reporting - New dropdown list for the State field in Business Maintenance

The **State** field in **Business Maintenance** has been changed from a text field to a dropdown list.

The screenshot shows the 'Business Editing' form. The 'State' field is a dropdown menu with a list of Australian states and territories: ACT, NSW, NT, QLD, SA, TAS, VIC, and WA. The 'VIC' option is currently selected and highlighted in blue. Other fields visible include Business Code (001), First Financial Year (01/07/1996), Business Name (Minfos Pharmacy), Street (Bourke St), Suburb (DOCKLANDS), Postcode (3008), Phone No., Fax No. (03 1234 5678), ABN, A.C.N., Starting Date (01/08/2014), and Ending Date (01/12/2050). There is also a 'Find' button next to the Suburb field and an 'Automation Settings' section with checkboxes for Auto Cash Manager, Auto Payables, Auto Receivables, and Auto General Ledger.

When you update to Minfos 5.3.2, the state field should automatically update to your state (provided it already contained text).

If the update could not match the existing text it will default to **ACT**. Please update to your state accordingly.

## Multi-Store

### Head office changes to the Product Type are now displayed in Audit Reports

Changes made by **Head Office** to the **Product Type** are now logged in the subscribed store's **Product Audit Report**, allowing the store to clearly identify when a change to the **Product Type** has been made from Head Office.

## Multi-Store - Promotions

### Re-exporting Promotions to subscribed stores no longer re-triggers accepted errors

Promotions that have been re-exported by **Head Office** to stores will not re-trigger any errors that have been already accepted at the store.

This ensures that products will no longer be placed back in error after the error has already been accepted.

## Resolved Issues

### Dispense

- Selecting a Private drug entry now defaults the Rx Type to Private.
- Dispensing S3 Recordable scripts no longer counts towards Safety Net.
- A White Repatriation patient now prompts to issue the correct Safety Net card depending on which threshold is reached first.
- Quick Dispense now displays the correct number of times dispensed for a deferred script.
- Minfos now only displays alternate drugs of the same brand equivalence.
- Minfos no longer reports an error when adding in Sigs.
- Minfos now flags outside repeats properly in the database.

### Stock Manager

- Minfos now prints 'Non APN Bar Coded Only' labels when selected.
- Product Type 'Services' are no longer flagged to be updated in a Rolling Stocktake.

### Till

- A Major Balance Error no longer occurs for Chemo scripts where the unit cost of the combinations is 0.00.

### Ordering

- Minfos now correctly generates an order if there are uncollected scripts and Max Shelf Hold set against the product.

### Promotions

- Multibuy now works correctly if the Qualifying and the Discountable product is of the same or higher retail price.

### Multi-Store

- Multistore Transfer no longer crashes when transferring products with no MNPN.
