

Minfos 5.10.2

release notes

November 2019

Enhancement

Dispense

The **Totals Label** option contains a unique barcode that sales clerks can scan at the Till, efficiently recalling all scripts dispensed for that customer on that day.

The dispense team can check and pack items into a bag after dispensing and seal with the Totals label attached. The sales clerk can then scan the barcode on the Totals Label into the Till and reconcile the sales basket to the number of items listed on the Totals Label, supporting a more effective confidentiality chain throughout the sales process.

The enhanced Totals Label also contains other valuable information, including the number of scripts, the total value of those scripts, the date and the Scripts on File Indicator.

The Totals Label is also customisable. You can easily copy the default Minfos label to create your own or make custom changes to the existing one.

Using the Totals Label with the customer barcode is **optional**, and is controlled by a configuration setting. To continue using the existing label without the barcode there is no action required.

For more information, please refer to the [Totals Label User Guide](#).

Resolved Issues

Dispense

- The Dispense form now populates correctly with a scanned barcode after selecting **Add**.
- **Streamline Codes** now display correctly.
- Minfos no longer changes the **Safety Net Contribution** when editing a CTG script.
- Minfos no longer prints an extra digit when dispensing a chemo item.
- The **Drug Recall** button in the **eScript Details** dialog box now recalls the **Drug Recall Window**.
- Pre-selecting a drug in the **eScript Details** dialog box now displays the correct drug into the Dispense form.
- Minfos now prints the title of patients up to a length of six characters.
- Double clicking in the **Generic Drug Listing** window now selects the drug.
- The **Enable Range** function in **Dispense Drug Pricing** now works correctly.
- A prompt no longer displays if there are repeats or an increase in quantity for **Private** Scripts.
- The [Arrow] keys on the keyboard now select prescribers in **Prescriber Maintenance**.
- The **Repeats** field and quantity now correctly populate after selecting a drug.

Stock Manager

- **Profit Analysis** will now launch without any errors.

Order Maintenance

- The **Product Info** tab will now prompt after cancelling out of **Order Detail** without making a change.
- Minfos no longer generates a product into an order when it has zero Stock On Hand and is charged to a Third Party Pillbox.
